No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc., (Operations Staff, P.O. Box 765, Schenectady, New York 12301), for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1978 articles are the same as those shown for current articles.

Contents of Volume 67

Number 1, November 1978

Information for Authors

Developmental Biology will publish papers on problems of development in the roadest sense. Embryonic and postembryonic development, growth, regeneration and issue repair in plants and animals, and the analysis of these phenomena at the nolecular and cellular levels are topics suitable for the journal. Papers on reproductive iology, aging, and teratology will be published only when they bear on developmental nechanisms of general interest. Papers are sought that employ the techniques and oncepts of many disciplines including those of biochemistry, biophysics, cytology, xperimental morphogenesis, genetics including cell genetics, immunology, neurobiol-gy, physiology, and microbiology. In all areas, analytical rather than descriptive tudies will be favored.

Original papers only will be considered. Submission of a manuscript implies the uthors' assurance that the same work has not been and will not be published nor is resently submitted elsewhere, and that all persons listed as authors have given their pproval for the submission of the paper; further, that any person cited as a source of ersonal communications has approved such citation. Explicit proof of these implied ssurances may be required at the Editor's discretion. Articles and any other material ublished in *Developmental Biology* represent the opinions of the author(s), and should ot be construed to reflect the opinions of the editor(s), the publisher, or the Society of evelopmental Biology.

Authors submitting a manuscript do so on the understanding that if it is accepted for ublication, copyright in the article, including the right to reproduce the article in all rms and media, shall be assigned exclusively to the Publisher. The Publisher will not efuse any reasonable request by the author for permission to reproduce any of his or er contributions to the journal.

Articles usually do not exceed 15,000 words and must be preceded by an abstract of bout 200 words that should be fully intelligible by itself. Brief notes are 2500 words or ss, including the bibliography, and should have an abstract of less than 100 words. ll papers will be published in English.

Manuscripts should be concise. Full documentation of results in support of conclusions ould be combined with maximum brevity compatible with clarity. The discussion ction should relate the present work to previous knowledge but should not be xpanded into a review of the field. The standard order of sections is: abstract, troduction, materials and methods, results and discussion. Combined results and scussion may be used. In the manuscript acknowledgment, references, footnotes, bles, and figure legends should follow the discussion in that order. All pages of the anuscript should be numbered consecutively and typed double-spaced throughout. uthors should provide a running title of 35 letters and spaces or less. Use footnotes paringly. Cite them with superscript numbers and type them on a separate sheet. ith rare exceptions do not italicize for emphasis.

In the Methods section, authors should draw attention to any particular chemical or iological hazards that may be involved in carrying out the experiments described. ny relevant safety precautions should be described; if an accepted code of practice has een followed, a reference to the relevant standards should be given.

Abbreviations and units should be used consistently. Consult the lists published in ne *Proceedings of the National Academy of Sciences (U.S.A.)* the *Journal of Biological hemistry,* and *Biochemistry* for standard abbreviations which need not be defined. ollect all abbreviations into a footnote and refer to it at the first use of an abbreviation.

The use of units should follow the Système International. Use prefixes, e.g., μM, not 10^{-6} M. Note that *M* stands for molar, not mole. Use hr, min, sec, rpm, and cpm without definition, without a period, and without an "s" in the plural (i.e., 20 min).

Figures should be numbered consecutively in the order of their appearance and each should have a descriptive legend. Mark all figures with the author's name.

Line drawings should be made with India ink on smooth white paper or professional-quality drafting paper. Do not submit original line drawings larger in size than 13 x 10 in.; instead enclose smaller prints. Good quality prints are acceptable in any case. Drawings will be reduced as much as is compatible with the complexity of the figure, usually to column or page width. The lettering should be large enough to be at least 1.5 mm high after reduction.

Photographs should be the actual size for reproduction and labeled with letters 2 to 4 mm high. Figures should fit column or page width and should be at most 8 in. long. If the author decides to bleed the page (no margins), labels and figure numbers should be no closer than 3/4 in. to the margin. Figures to be bled must be 7 × 10 1/4 in. (17.8 × 26 cm) to allow trimming. When several figures appear together as one plate, mount them on cardboard or paper as close together as possible. The engraver will tool thin white lines between figures. Give magnifications in the legends or indicate them with a scale marker on the photograph. The second copy of each manuscript must include good-quality glossy prints of all photographs. Two reviewers' copies should be submitted when originals are oversized or mounted on heavy cardboard. The author will defray the expense of color plates.

Tables should be typed on separate pages and numbered consecutively with Arabic numerals, and each should have a concise heading.

References to the literature should be cited as: Doe (1965) has observed that . . . (Doe, 1955); Doe *et al.* (1960) should be used in the case of articles with more than two authors. Use suffices a, b, etc. following the date to distinguish two or more works by the same author(s) in the same year (Doe, 1960a, b). Numbered references will no longer be accepted. Arrange literature citations in the bibliography alphabetically according to the surname of the author, using the following order of items: author(s), date of publication, title of article or book, journal name, volume number, inclusive pages, publisher and city (for books only). Abbreviate titles of journals according to *Chemical Abstracts' Service Source Index*.

Page proofs rather than galleys will be sent. This speeds production. Detailed instructions will be sent with proofs. A quick response and minimal changes on proof are imperative to maintain schedules.

Features will include announcements of meetings and courses in the field of developmental biology, and some meeting reports. Persons interested in preparing meeting reports are encouraged to contact the Editor.

To submit a manuscript, send two copies to Igor B. Dawid, Department of Embryology, Carnegie Institution of Washington, 115 West University Parkway, Baltimore, Maryland 21210, Tel. (301) 235-0460. Indicate the name, address, and telephone number of the author who should be contacted in editorial matters.
